MANASA S R

Bengaluru, Karnataka | +91 8880022251 | manasasrup2174@gmail.com | linkedin.com/in/manasa2174/ | github.com/manasasr123

PROFESSIONAL SUMMARY

Detail-oriented Manual QA Engineer trainee with hands-on project experience validating web applications and REST APIs built on Java, Spring Boot, and MySQL/PostgreSQL. Skilled in test case design, functional, regression, smoke, and API testing, defect logging, and SQL-based backend verification. Strong grasp of SDLC/STLC and Agile/Scrum, gained by tracing requirements to test cases and verifying fixes with development teams. Seeking a Manual Tester / QA Analyst role to drive product quality through rigorous, requirement-driven testing.

KEY SKILLS

- Testing Types: Functional, Regression, Smoke, Sanity, UI, System, Integration, and API Testing
- QA Fundamentals: SDLC, STLC, Bug Life Cycle, Test Case Design, Test Plan Preparation, Requirement Traceability Matrix (RTM)
- Tools: Postman (API testing/validation), MySQL Workbench, Eclipse, VS Code, Git, GitHub
- Defect & Database Testing: Manual defect logging/tracking, exploratory testing, SQL query writing and validation on MySQL/PostgreSQL
- Domain Exposure: Java (Core Java, OOP), Spring Boot/MVC, Hibernate, JDBC, HTML5/CSS3 — enables faster root-cause analysis when logging defects
- Process & Collaboration: Agile/Scrum ceremonies, requirement analysis, cross-functional coordination with developers

PROJECTS — TESTING & VALIDATION FOCUS

Event Management System

HTML, CSS, JavaScript

- Designed and executed functional test cases for core modules — admin login, event creation, event updates, deletion, and event listing — covering positive, negative, and boundary scenarios.
- Performed manual CRUD verification across event management modules, confirming data consistency after create, update, view, and delete operations.
- Validated form-level input handling and error messaging across multiple fields, logging and retesting defects until closure.

MediSlot – Smart Doctor Appointment Booking System

Java, Spring Boot, Hibernate, MySQL, HTML, CSS, Thymeleaf

- Wrote and executed test cases covering doctor registration, verification, appointment booking, slot selection, and appointment management workflows.
- Manually tested CRUD operations and validated database records across doctor, patient, appointment, and slot-related tables, confirming data integrity.
- Verified end-to-end data flow across Controller, Service, Repository, and Entity layers to identify defects and validate fixes during testing.

WORK EXPERIENCE

Java Full Stack Developer Trainee | Dhee Coding Lab *January 2026 – Present*

- Completed 300+ hours of structured training covering Core Java, JDBC, SQL, Hibernate, Spring Core/MVC, and REST APIs, building a strong foundation for test-case design and defect analysis.
- Created and manually tested database-driven CRUD applications across 5+ MySQL tables, verifying data accuracy and applying OOP-based test scenarios.
- Manually verified 5+ REST endpoints built with Spring MVC and Hibernate/JPA, checking response accuracy, status codes, and exception handling.
- Tracked test iterations and defect fixes using Git/GitHub across 50+ commits, coordinating retesting after each fix.

EDUCATION

Bachelor of Engineering – Information Science and Engineering | Bapuji Institute of Engineering and Technology, Davanagere *2022 – 2026*

CGPA: 9.19

CERTIFICATIONS

- Programming in Java - NPTEL
- SQL(Basic) - HackerRank
